INTRODUCTION

Antaira Technologies' IVC-4011-T-V2 is an Industrial Ethernet Extender that has a switching architecture with 4 RJ-45 10/100/1000Mbps Ethernet ports and one asymmetric or symmetric Ethernet over VDSL port– the VDSL port can be RJ-11 or BNC connector. The embedded BNC or RJ-11 port is allowing customers to continue using their existing network with the current coaxial cable or telephone wire without the need of rewiring.

The IVC-4011-T-V2 provides a high level of immunity to electromagnetic interference and heavy electrical surges typical of environments like plant floors or in curbside traffic control cabinets. The IVC-4011-T-V2 is designed with an IP-30 metal case with DIN Rail or Wall Mount support. It also can operate under any extreme ambient weather temperature range from -40 to 75°C.

Without spending extra costs, users can easily re-deploy a new local Internet in any residential areas, public service facilities, campuses, and hospitality environments by applying the IVC-4011-T-V2 on the original network structure.
