

19" and 17" Industrial Monitors
DuraVision®
FDS1903/FDS1703

Monitors designed specifically for security that offer PC and composite (BNC) inputs, high image quality, and long-term reliability

PC and Video Inputs

Both monitors are equipped with an analog D-Sub mini 15 pin input for connection to a PC and a composite (BNC) input for connecting to video surveillance equipment such as closed-circuit televisions (CCTV) and security cameras.

High Image Quality

To reduce ghosting and flicker, the video input has a Y/C separation circuit which separates the brightness signal (Y) from the color information signal (C), allowing the monitors to display high quality images with little noise. The monitors produce 16.77 million colors for clear and vivid display.

19-inch, 17-inch, and VESA-Mount Models

- 19-inch and 17-inch versions
- 2 color variations
- VESA-mount (no stand) model also available

19" and 17" Industrial Monitors

DuraVision[®]

FDS1903/FDS1703

Underscan and Normal Display

Both underscan and normal display settings are available. Underscan shows 100% of an image and is ideal for video. Overscan displays about 95% of an image, which eliminates extraneous TV broadcasting data that sometimes appears at the edges of the screen.

Versatile Positioning

The stand has a 100 mm height adjustment range, 30° tilt, 70° swivel, and 90° pivot for portrait mode so the screen can be adjusted to the ideal viewing position.

NTSC/PAL/SECAM Support

Both monitors support NTSC, PAL, and SECAM signals and can connect to a variety of different security and surveillance equipment.

Built-in Speakers

Compact dual 0.3-watt stereo speakers with RCA inputs are built-in for audio capability with both PC and video sources.

High Brightness Display

With a maximum brightness level of 350 cd/m², the screens have high visibility even in bright ambient environments.

Easy-to-See Gamma Mode (FDS1903)

The FDS1903 includes a mode that makes it simple to change the gamma settings. You can improve visibility by changing the gamma depending on the type of image being displayed.

Mode	Gamma	Feature
Light	2.2	Improves general visibility in dark images
Dark	3.0	Improves visibility in images with overall low contrast
Dynamic	1.9 - 2.2	Greatly increases contrast levels and improves image detail

Clear View from Below (FDS1903)

For environments where the monitor is placed above eye level and the user must look up to see the screen, the FDS1903 includes an "Up View" function that minimizes the washing out of colors that may occur when viewing an LCD screen from below.

When viewed from below

Up View Off

Up View On

Remote Control (FDS1903)

A remote control is included for turning the monitor's power on/off, navigating the OSD menu, adjusting the volume, toggling preset modes and switching between input signals. It is ideal for environments where the monitor is mounted on a wall.

LED Backlight

The monitors come equipped with an energy-saving LED backlight. Compared to conventional CCFL backlights, LED backlights last longer and consume less power. They are also mercury-free to have minimal impact on the environment when they are eventually disposed of.

Accessory

LA-030-W

Flexible arm (3-Axes)

Mount your LCD monitor on a wall and change the screen position as necessary with tilt and swivel capability. Position the monitor to almost anywhere with the forward/backward and side-to-side movement. Available in gray or black.

24-Hour Use, 2-Year Warranty

The FDS1903 and FDS1703 offer long-term reliability; they are built for 24-hour use and are backed by a two-year manufacturer's warranty.

To ensure each EIZO monitor meets our high standards, we develop, manufacture, and test them ourselves at our own facilities. Our quality control process includes long-life testing where monitors are left on for tens of thousands of hours and an on-site anechoic chamber to test for compliance with international EMC (electromagnetic capability) regulations.
